[Looking for Talented Interns] SixSense Internship Program- Good Stipend

About SixSense:

Founded by alumni from IIT and NIT, and funded by top investors in Asia, we at [SixSense](#) are building a no-code AI platform that allows users to effortlessly create computer vision models for image-based applications. Our primary focus is addressing the challenges faced by manufacturing companies in manually inspecting millions of images for defects. Therefore, we particularly enable manufacturing engineers to autonomously build and deploy CV models, monitor their performance, and maintain them seamlessly using our advanced software.

We are product first company with a team of 25 members based out of both Singapore and India and are looking for talented interns to become a part of our family. We have positions open for Backend development.

The Founders:

- Akanksha is the co-founder and CEO at SixSense. She did her B.Tech in Mechanical Engineering from IIT Gandhinagar in 2014. She worked with Hyundai Motors, General Electric, Washington University & A*STAR Singapore and also led product design teams @Embibe and Headout (now multi-million-dollar startups). At SixSense she leads the sales and business development efforts.

- Avni, is the co-founder and CTO at Sixsense. She did her B.Tech in Computer Science Engineering from NIT Allahabad in 2016, worked at Visa India, and then moved to Singapore to join Entrepreneur First (a global talent investor / incubator with 500+ portfolio companies that are valued in excess of $4B+) as a Founder in Residence. At SixSense, She has been leading the product and engineering team of over 15+ people for ~4 years and primarily manages product and engineering.

The Opportunity: Backend Engineer Internship

In this internship, you will work closely with the senior technical leaders on innovative problems to build a product that users love! You will become a part of our close knit family and build connections that last a lifetime.

- We prefer a 6 month internship commitment
- Students with prior internships in Product based organisations are preferred
- We are mostly looking to make 2 internship offers for this role

Key Responsibilities:

- Responsible for building low-latency, high-availability, and high-performance applications
- Experience with Python or Django is a must

○ Experience with database design fundamentals, cloud technologies like AWS/Azure and understanding of deployments is preferred

Perks :

- 5-6 months internship (flexible), can also extend it for good performers.
- The pay would be INR 40,000 - INR 50,000 per month
- Weekly games/activity session with the entire team
- Team discussions on product and business growth strategies. Experience & insights for those who want to startup in the future.
- Flexible Working hours and direct work with co-founders. Access to them for any help needed on academics/career
- Interns can be considered for a Pre-Placement Offer (PPO)

How to Apply

- To apply, please fill the google form here
